1) .describe()
2) Visual python
3) Regression with log transform
4) Locally weighted Regression
5) Evaluation metrics for a Confusion Matrix
6) Annotation
7) Explainability
8) Neural net using scikit-learn, tensorflow and keras
9) Experiment tracking - MLOps

Using tools - Neptune.ai & history

for the expts - Improving the neural net

a) with hidden layers
b) with dropout.
10) A Deep learning model
